

What we do:

Transparent & efficient procurement for foundries.

We do this by reducing risk, optimising cost and improving the procurement process with help of our technology & domain expertise. Foundries can now drive their focus and effort solely into manufacturing as NowPurchase handles all their procurement needs.

Company Website : <https://foundry.nowpurchase.com/>

Technology vision :

The B2B manufacturing industry has a lack of digitization globally. The dismal attempts at digitization have resulted in very clunky unreliable interfaces which the customers don't trust. Some work very well but are far from being aesthetically pleasing. There is much work to be done and a new standard needs to be set here.

We are building mission critical systems with a very high stake to be used by very technical personnel as well as executive management. At the same time we are building intuitive internal systems to scale our existing sales and operations so that each of our teammates are able to make a disproportionate impact on the business.

Role:

1. Your responsibilities will be to ensure leading the front end team and take accountability of the entire stack.
2. You will be responsible for delivering iterations every sprint on our B2B products. Our stack is ReactJS, Redux (Thunks) deployed over netlify.
3. You will be responsible for code reviews and ensuring high quality code and CI pipelines. Unit tests for critical parts of the system are expected.
4. Our future roadmaps include mobile applications and hardware terminals for which interfaces need to be deployed.

Nice-to-have Skills (not mandatory but will be a bonus):

1. Interest in Flutter and ReactNative
2. Experience working in a fast-scaling start-up with a multicultural team
3. Experience in leading a team will be a plus
